

The Great Ohio Valley Flood of 1913 100 Years Later

Your house protects you from rain coming down. Protect it from water rising up.

Are you as safe as you'd like to be?

If you are within the FEMA Special Flood Hazard Area (100-year floodplain) you may also be at risk of damage from smaller, more frequent floods. If you are outside of the FEMA Special Flood Hazard Area you are still at risk from larger, less frequent floods.

Things to Consider

You don't need to be next to a stream or river to be flooded. Flood waters can extend hundreds or thousands of feet from the nearest open watercourse, either overland or through backup of storm or sanitary sewers. Even shallow depths of floodwaters can cause damage in the thousands of dollars.
